Creating Production Connection Profile:

Please following the following steps to add our connection profile:

1. Open the "Select a profile" panel by clicking on the "Connection Profiles" button on the top of your client application.

   a. By doing this, you should see a new panel appear

2. Click on the "Edit connection profiles" button on the bottom of the panel

3. A new window called "Connection Profiles" should now appear. Click on the "Create" button in this window.

4. You should now see a new window called "New Connection Profile", fill in the information to match the settings from the image below.

Modify Connection Profile

Name:	PRODUCTION
Server ID:	inowapp01-a.ad.fiu.edu
Server Type:	Production
Port Number:	6000

Login Profiles

☐ Use OpenID Connect

Profile Name:

Integration Server URL:

☐ Automatically connect on launch

**Remember Username**

○ Always prompt
○ Set to: acosano
◉ Remember last successful user name

OK   Cancel

5. After matching these setting, click "OK" in the bottom of the window.

6. Inside the "Connection Profiles" window, select the "Use default profile" option and select the "PRODUCTION" option.

7. Finally, you can close the "Connection Profiles" window by clicking "OK" and try to login using your credentials.

Once these steps are completed, the profile will be saved, so you won't need to repeat it again.
